Our history...

1952

Antonio Rivillas Casado began his career in **Marmolejo**, founding a company dedicated to the production of liquors, starting with the most popular at the time in Spain, the anisette.

Thus began the history of Anís "Flor de Jaén", which was produced in the traditional way using a copper still.

1958

In order to increase the production and in search of new logistic solutions, the company moved to **Andújar**, to its current location on the **Autovía de Andalucía Km. 324**, and expanded its product range with the coffee and cocoa liqueurs.

It was during these years when the name **RISKA** began to be used for the whole production range.

1971

It means the arrival of the second generation in the company. **Alfonso Rivillas Jurado** takes over, reinforcing the company and modernizing the production processes.

It is then that the range of products is expanded, many of which still remain in the **RISKA LICORES** catalog.

2003

The facilities are updated, providing them with the most modern technology in the industry, subjecting the company to a continuous process of improvement. Among others, the following stand out:

- A complete water treatment process, which ensures a high purity of the water, essential for the production of quality liqueurs.
- A computerized dosing system, which guarantees the uniformity of the production.

Riska

- **Pasteurizer** built into the bottling line, avoiding possible risks of contamination by pathogenic organisms.

- **Computerized manufacturing process**, which, together with the exhaustive selection of raw materials and a complete automatization of the bottling line, avoids sanitary fractures, always providing the highest quality.

- **Extensive storage facilities** make possible the programming of production targets and allow us to maintain a stock of all the references that make up the RISKALICORES portfolio.

2014

Some changes are made to match the entry into the company of the **third generation**. A **creative and marketing department is created**. The **logo is redesigned**, adapting it to the new times, as well as the range of products. Bottling and labeling are changed and new products are introduced to the market, such as Premium 1952 Gin and Riska Pink Gin.

Production is unified, reducing the carbon footprint and improving control in the production chain, allowing to continue offering a top quality product at a **competitive price**.

2017

The sales model, traditionally focused on the **HORECA** sector, is diversified and extended to **big retail chains** and the expansion to new markets beyond our borders.

We are also committed to **e-commerce**, developing an online store and accessing marketplaces such as Amazon or Ali Express.

2018

In the constant process of improving our facilities and production processes, during this year we obtained the **IFS Food Higher Level** certification, which has been renewed annually. This is the highest worldwide certification in terms of quality and food safety, resulting in a product that complies with the maximum guarantees.

2021

In the relentless pursuit of improvement, during this year a complete **change of the bottling line** took place, improving the control of packaging and production.

The expansion of the brand was consolidated, **reinforcing exports** to Andorra, Germany, Morocco and Portugal.
